

CLAIMS

I claim:

- 1.) A kit for attaching an accessory to a trimmer, comprising:
 - a trimmer head accessory body, said body having a top side and an underside;
 - a recess in said underside, said recess having certain dimensions;
 - a central aperture extending through said recess to said top side; and
 - a set of diverse fasteners for attaching said body to a trimmer's shaft, wherein said fasteners have external dimensions that are substantially the same as the other fasteners in the kit, and wherein said external dimensions are substantially the same as the dimensions of said recess.
- 2.) The kit according to claim 1, additionally comprising a spacer cup.
- 3.) A rotary brush attachable to a trimmer, comprising:
 - a head having a top side and an underside, said underside having a central region and a peripheral region;
 - bristles in said peripheral region;
 - a head recess in said central region;
 - a boss descending into said head recess;
 - a boss recess in said boss; and
 - a central aperture extending through said boss recess to said top side.
- 4.) The rotary brush according to claim 3, wherein said head recess is formed by a protrusion in said top side.
- 5.) The rotary brush according to claim 4, additionally comprising a protective insert in said boss recess.
- 6.) A kit for converting a trimmer into a rotary scrubbing tool, comprising:
 - a rotary brush according to claim 3, 4, or 5; and
 - a set of diverse fasteners for attaching said rotary brush to a trimmer's shaft.

- 7.) The kit according to claim 6, wherein each of said fasteners has external dimensions, and wherein said external dimensions are substantially the same for at least two of said fasteners.
- 8.) The kit according to claim 7, additionally comprising a spacer cup.
- 9.) The kit according to claim 8, additionally comprising a washer.
- 10.) A method of converting a trimmer into a rotary scrubbing tool, comprising:
 - providing a trimmer with a spool housing attached to a shaft;
 - providing a kit according to claim 7;
 - removing the spool housing, thereby exposing said shaft;
 - placing said head on said shaft through said central aperture, so that said shaft extends into said boss recess;
 - selecting an appropriate fastener from said set of fasteners; and
 - attaching said head to said shaft by attaching said appropriate fastener to said shaft in said boss recess.
- 11.) A method of converting a trimmer into a rotary scrubbing tool, comprising:
 - providing a trimmer with a spool housing and a shaft extending through said spool housing;
 - providing a kit according to claim 8;
 - placing said spacer cup over said shaft, so that said shaft extends through said spacer cup;
 - placing said head on top of said spacer cap, so that said shaft extends through central aperture into said boss recess;
 - selecting an appropriate fastener from said set of fasteners; and
 - attaching said head to said shaft by attaching said appropriate fastener to said shaft in said boss recess.
- 12.) A kit for converting a trimmer into a rotary scrubbing tool, comprising:
 - a rotary brush according to claim 3, 4, or 5; and
 - means for fastening said rotary brush to a variety of trimmers.
